The Notes Below Are An Integral Part of this Report | Track Record Compiled By: CTA Services

Program Description: Old School Program, a speculative futures trading program currently offered by HPX Financial, LLC. This program is generally more aggressive than the HPX Ag Program. All performance has been reduced to reflect the effect of a 2% per annum management fee and a 20% incentive fee, assessed on net trading profits above a high-water mark. Head Trader is Harvey Paffenroth, started out on the CME in 1971 running tickets, placing orders and bought his membership shortly thereafter. Harvey started off trading pork bellies, and even worked on the physical side of the market taking delivery of pork bellies, storing and selling them later. He continued to both trade on the CME in the pits and continued his hedging business until the end of the pork bellies contract, by which time he HPX has already transitioned into lean hogs and cattle products, which are now live cattle and feeder cattle.

Investment Information

Program Start Date	Jun-2006
Percent Discretionary	100%
Percent Systematic	0%
Minimum Investment	200,000
Management Fee	2.00%

+ NOTES: Includes the performance of all customer accounts traded pursuant to the Old School program. These accounts are managed by the Advisor beginning January 1, 2013. Prior to January 1, 2013, they were managed by the Advisor's principal in his capacity as a floor broker.

** The drawdown begins in the month listed as start. The length in months of the drawdown is listed under length. The recovery begins in the following month, and the length of the recovery period is listed under recovery. The date listed as end is the month that the program recovered from the drawdown.

Please note that the monthly performance numbers, ROR and Drawdowns are based on end of month values and are not reflective of intramonth volatility.

Statistical Notes

1. Peak to Valley Drawdown ("Maximum Drawdown") is the worst drawdown % loss over the period of 2013-01-31 to 2018-07-31
2. The Annualized Compounded ROR is the average return of an investment over a number of years. It smoothes out returns by assuming constant growth.
3. Calmar Ratio Uses last 36 months of Data

ROR = Rate of Return

AG CTA Index: The Autumn Gold CTA Index is a Non-Investable Index comprised of the client performance of all CTA programs included in the AG database and does not represent the complete universe of CTAs. CTA programs with proprietary performance are not included. Monthly numbers are updated until 45 days after the end of the month. Investors should note that it is not possible to invest in this index.

SP 500 TR: The S&P 500 indices are designed to reflect all sectors of the U.S. equity markets. The S&P 500 includes 500 blue chip, large cap stocks, which together represent about 75% of the total U.S. equities market. Companies eligible for addition to the S&P 500 have market capitalization of at least US\$3.5 billion. The TR Index accounts for the reinvestment of dividends.
